

## The project documentation should contain:

### The title page

#### 1. Introduction

- the topic context
- the issues that should be resolved
- the proposed objectives
- the documentation structure

#### 2. Theoretical background

- the bibliographical study from the existing literature (cite every source)
- the description of the methods that can be applied
- the description of the possible solutions

#### 3. Design and implementation

- the description of the chosen solution which successfully realizes the proposed objectives
- the block diagram
- the description of the implementation flow
- the description of the functionalities from all implemented modules
- the description of the implemented algorithms
- the description of the application usage

#### 4. Experimental results

- the practical results obtained in different test cases (scenarios)
- the remarks on each obtain result
- the proof that the obtained results are valid

#### 5. Conclusions

- the achievements and the way of accomplishing the objectives
- the personal contributions
- the observations about the obtained results
- the future development directions

### Bibliography

- the list of the references that were used in the documentation
